Server-Side Development: Express, Security and Session Storage, User Authentication, MERN Stack (MongoDB, Express.js, React.js, Node.js). Quality Assurance: Writing Tests.

Software: Trinium, Roadnet, XRS/XATA, TMW, Dataease, MAS 200 and MAS 500 software, AS400, Netsuite online management software, UPS Worldship, Campus Ship, Starship, and Federal Express shipping systems. Vast knowledge of Microsoft Office, Peachtree accounting software, Outlook and Outlook Express, Internet Explorer, Mozilla, and other various computer software.

Projects
Virtual Art Gallery
https://github.com/nlamonaco86/Virtual_Art_Gallery | https://nlamonaco86.github.io/Virtual_Art_Gallery/

- Virtual Art Gallery is an application that displays works of art from magic the gathering cards in a dynamic gallery based on the object in the art or the card name. It can then in turn generate a random giphy and save the art to a Dropbox account while browsing.

- Core responsibilities were creating the HTML code and adhering to a responsive web design using the Materialize framework, also created the slideshow for the project repo, and discussed the technologies and challenges in the project's development during the presentation.

- Utilized HTML, Materialize, CSS, Javascript, and Jquery along with APIs for our target collections. The API's we used for the project were Scryfall (Magic Cards), GIPHY (random GIFs) and Dropbox (for download).

Life-Point
https://github.com/aholanda12/life-point | https://life-point.herokuapp.com/

- Life-Point is a journal, an affirmation generator, a wellness tracker, and a mental-health resource all in one application. Core responsibilities were writing javascript for functionality, creating a welcome page, formatting the handlebars pages, generating the readme, creating the prezi presentation and writing the presentation speeches for each team member. The application utilized HTML, CSS, Node.js, and Express, MySQL Database and Sequelize ORM, deployed with Heroku, MVC folder structure, Handlebars, API keys.

● Life-PointV2 is a journal, an affirmation generator, a wellness tracker, and a mental-health resource all in one application. Core responsibilities were refactoring Handlebars to ReactJS for frontend, refactoring Sequelize to MongoDB, generating the readme, creating the prezi presentation and writing the presentation speeches for each team member. The application utilized HTML, CSS, React, Node.js and Express, MongoDB/Robo3T database, deployed with Heroku, MVC folder structure, Axios keys, Record RTC.
